Welcome to The DB Piping Group

The DB Piping Group is comprised of four businesses that are focused on serving customers in the stainless steel piping and fabrication industries. ABE, Formweld, Douglas Barwick and Douglas Brothers have come together to provide customers with more comprehensive stainless steel piping and fabricating products and improved levels of services and quality. These businesses will focus on different segments of the industry allowing customers to find the best partner regardless of the business need.

Douglas Barwick's business focuses on engineered projects, spooling and end-user requirements for pipe and fittings. With an experienced work force they are able to manage both small and large scale contracts.

Douglas Brothers provides engineered fabrication for multiple products. Their skilled team of estimators, assemblers and welders can focus on specific engineered needs from tanks to aerators to piping segments to specialized designs.

ABE is a highly efficient lean manufacturer that focuses on selling loose pipe and fittings to distribution and manufacturers. With advanced manufacturing and a global supply chain they can provide customers with a complete and highly competitive package.

Products

[The DB Piping Group](#) stands at the North American forefront in terms of standards, diversity and product range.

Items listed in this standard products catalogue are commonly kept in stock in grades 304L & 316L and in the thicknesses common to the North American market.

[The DB Piping Group's](#) expertise extends far beyond standard products. It also includes the fabrication of piping products that meet our customers special needs in terms of size, thickness and special alloys such as 317L, 904L, 254SMO, Duplex, Monel, Inconel, etc.

Specifications include ASTM A312, A403, A778 and A774 with larger diameter pipe manufactured in single random 20 ft lengths.

Our pipe and fittings are acid pickled to conform with specification ASTM A380.

Upon request our stainless steel products may include NSF 61 and G372 certification.

Drawing

[Douglas Barwick Inc.](#) can provide isometric drawings per customer's specifications at a low cost, using both CADPIPE and AUTOCAD software. This service allows our customer better planning of priorities and improves production lead-time. Shop sketches are also prepared for every spool assembly, facilitating assembly operations and eliminating most errors that could otherwise take place.

Spooling / Fabrication

[Douglas Barwick Inc.](#) and [Douglas Brothers](#) both offers shop spooling of pipelines in accordance with drawings and specifications. This is, by far, more economical than field assembly and assures a timely supply and quality of workmanship. When our companies supply spooling, several additional cost savings are achieved:

- Scrap reduction.
- Site inventory control
- Re-stocking charges & transportation of surplus material in both directions.

We also offer our expertise in the following areas:

- ASME B31.1 & B31.3
- ASME pressure vessel.
- Cotton ball finish.
- Capacity for major projects.
- Storage tanks.
- Custom made pieces manufactured to our customer's specifications.

Quality Assurance

All DB Piping Group companies value product quality and customer satisfaction. Our technicians design quality assurance procedures and ensure that they are rigorously applied.

All three business have on site quality personnel that ensures that inspections of both material and workmanship are carried out in accordance with the required quality assurance programs.

Summary of specification

Our I.D. (Inside Diameter) pipes and fittings in austenitic stainless steel are manufactured as per specification ASTM A 778 for pipe and ASTM A 774 for fittings.

With our high-tech equipment, pipe and fittings offer an excellent price/quality ratio. Pipe and fittings in inventory of this class are manufactured from ASTM A 240-304L & 316L base material. Other alloys are available upon request.

Pipes and fittings manufactured as per ASTM A 778 & ASTM A 774 specifications are commonly used in pulp and paper mills, water treatment plants and other industries where corrosion resistance is not essential [See Note (1)]. Longitudinal seams are welded as per our qualified welding procedures using automatic or semi-automatic state of the art plasma welding torches in a single or double set-up. This welding procedure reduces greatly the effects of carbides precipitation in the heated affected zone.

Pipe and fittings can be supplied in a wide range of diameters and wall thicknesses.

For each lot of pipe, a tensile, reverse and forward bend test is performed.

Welded elbows can be supplied as smooth flow or mitred construction, reducers are supplied as conical, tees, crosses and laterals are supplied as nozzle-welded.

Dimensions and tolerances of fabricated fittings are in the technical section, see Page 7-6. Special fittings can be supplied to customer design and size when required.

Only visual examination is performed on fittings.

Pipe and fittings are also pickled and passivated as per ASTM A-380 to maintain corrosion resistance and to prevent surface discoloration from free iron oxidation.

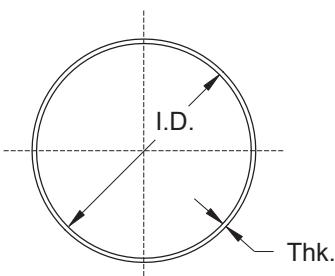

Base metal analysis is traceable to the original mill certificates.

As per ASTM A-778 & A-774, tolerance of nominal thickness permissible shall be $\pm 12.5\%$

Pipe and fittings are normally furnished in square cut ends but can also be provided with beveled ends.

Note

1. For heat treated pipe and fittings, please refer to section 4.0 of NPS ASTM A-312 and ASTM A-403.

90° Mitred Elbow
Long Radius

90° Mitred Elbow
Short Radius

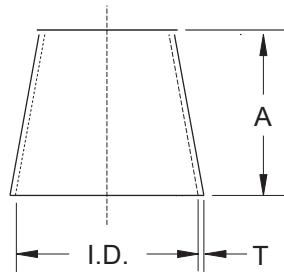

45° Mitred Elbow

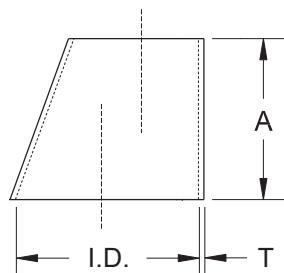

General Notes:

- a. Material: Stainless Steel 304L, 316L, 317L. Other alloys available upon request.
- b. Suggested Maximum Working Pressure : See technical section.
- c. Fabrication Tolerance: See technical section.
- d. Other diameter and thickness available upon request.

General Notes:

- a. Material: Stainless Steel 304L, 316L, 317L. Other alloys available upon request.
- b. Suggested Maximum Working Pressure : See technical section.
- c. Fabrication Tolerance: See technical section.
- d. Other diameter and thickness available upon request.
- e. The addition of reinforcement may be necessary. Upon request, the verification can be performed by our quality department. Please contact a technical representative for more information.

Butt Weld Angle Collars
 For use with Backing Flanges
 See P. 2-15

Slip-on Angle Collars
 For use with Slip-on Backing Flange
 See P. 2-16

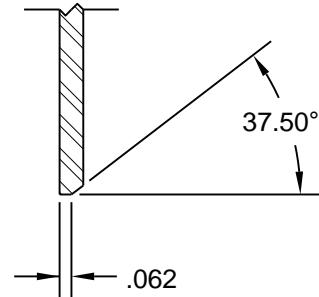

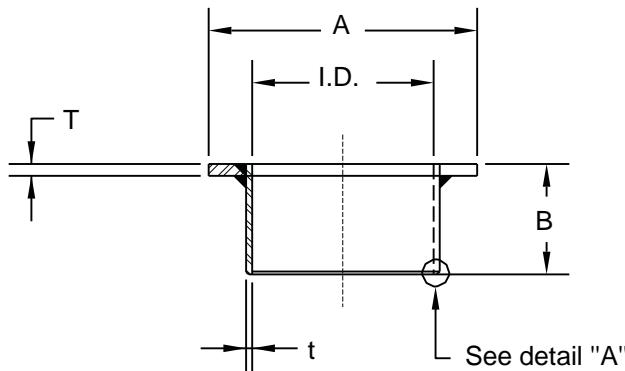

General Notes:

- a. Material: Stainless Steel 304L, 316L, 317L. Other alloys available upon request.
- b. Suggested Maximum Working Pressure : See technical section.
- c. Fabrication Tolerance: See technical section.
- d. Other diameter and thickness available upon request.

Detail "A" [Note 1]

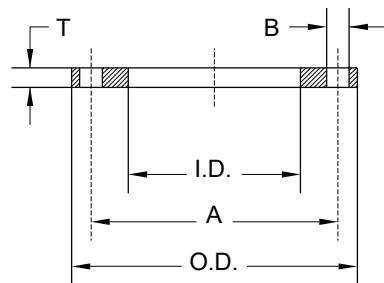

General Notes:

- a. Material: Stainless Steel 304L, 316L, 317L. Other alloys available upon request.
- b. [T] not less than [t].
- c. The two faces are machined, the contact face is machined between 125 and 250 microinches (AARRH).
- d. Solution Annealing on request.
- e. Other diameter, thicknesses and sizes available upon request.

Note:

- 1. Bevel for thickness (t) > 1/8" (3mm).

1219	1511	1245	1422		41	51	206.4

General Notes:

- a. Material: Carbon Steel with chemical composition and mechanical strength equivalent to ASTM A 105.
- b. Finish: Galvanized to ASTM A 123.
- c. Drilling: 1 1/2" to 24" ASME B16.5 Class150, 30" to 48" ASME B16.47 Class150 serie "A".
- d. Suggested Maximum Working Pressure : See technical section.
- e. Other diameter and thickness available upon request.

General Notes:

- a. Material: Carbon Steel with chemical composition and mechanical strength equivalent to ASTM A 105 and 316L Stainless Steel liner.
- b. Finish: Galvanized to ASTM A 123.
- c. Drilling: 1 1/2" to 24" ASME B16.5 Class150, 30" to 48" ASME B16.47 Class150 serie "A".
- d. Suggested Maximum Working Pressure : See technical section.
- e. Other diameter and thickness available upon request.

Summary of specification

Our NPS⁽¹⁾ (Nominal Pipe Size) pipes and fittings in austenitic stainless steel are manufactured as per specification ASTM A 778 for pipe and ASTM A 774 for fittings.

With our high-tech equipment, pipe and fittings offer an excellent price/quality ratio. Pipe and fittings in inventory of this class are manufactured from ASTM A 240 304L & 316L base material. Other alloys are available upon request.

Pipes and fittings manufactured as per ASTM A778 & ASTM A774 specifications are commonly used in pulp and paper mills, water treatment plants and other industries where corrosion resistance is not essential⁽²⁾.

Longitudinal seams are welded as per our qualified welding procedures using automatic or semi-automatic state of the art plasma welding torches in a single or double set-up. This welding procedure reduces greatly the effects of carbide reprecipitation in the heated affected zone.

Pipe and fittings can be supplied in a wide range of diameters and wall thicknesses.

For each lot of pipe, a tensile, reverse, forward bend test is performed.

Welded elbows can be supplied as smooth flow or mitered construction; tees, crosses and laterals are supplied as nozzle-welded. Reducers are supplied as either conical or bell-shaped.

Dimensions and tolerances of fabricated fittings are in the technical section, see (P.7-6). Special fittings can be supplied to customer design and size when required.

Only visual examination is performed on fitting.

Pipe and fittings are also pickled and passivated as per ASTM A 380 to maintain corrosion resistance and to prevent surface discoloration from free iron oxidation.

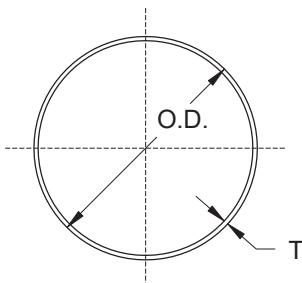

Base metal analysis is traceable to the original mill certificates.

As per ASTM A 778 & A 774, tolerance of nominal thickness permissible shall be $\pm 12.5\%$

Pipe and fittings are normally furnished in square cut ends but can also be provided with beveled ends.

Notes:

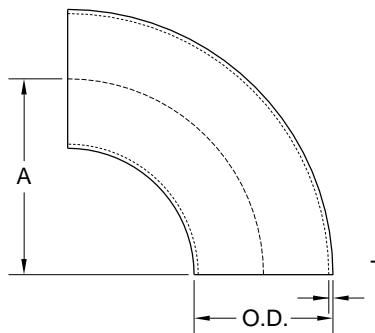

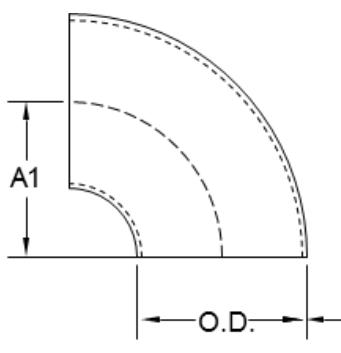

1. See also section 4.0 for NPS ASTM A 312 & ASTM A 403.
2. For pipe and fitting heat treatment please refer to section 4.0 NPS ASTM A 312 & A 403.

General Notes:

- a. Material: Stainless Steel 304L, 316L, 317L. Other alloys available upon request.
 - b. Suggested Maximum Working Pressure : See technical section.
 - c. Fabrication Tolerance: See technical section.
 - d. Other diameter and thickness available upon request.
- Note:**
1. The addition of reinforcement may be necessary. Upon request, the verification can be performed by our quality department. Please contact a technical representative for more information.

General Notes:

- a. Material: Carbon Steel with chemical composition of ASTM/ASME A283 Grade D or equivalent, or ASTM/ASME A105 available upon request.
- b. Finish: Galvanized to ASTM A 123.
- c. Drilling: 1 1/2" to 24" ASME B16.5 Class150, 30" to 48" ASME B16.47 Class150 series "A".
- d. Suggested Maximum Working Pressure : See technical section.
- e. Other diameter and thickness available upon request..

General Notes:

- a. Material: Carbon Steel with chemical composition of ASTM/ASME A283 Grade D or equivalent, or ASTM/ASME A105 available upon request.
- b. Finish: Galvanized to ASTM A 123.
- c. Drilling: 1 1/2" to 24" ASME B16.5 Class150, 30" to 48" ASME B16.47 Class150 series "A".
- d. Suggested Maximum Working Pressure : See technical section.
- e. Other diameter and thickness available upon request..

Summary of specification

Pipes, fittings and flanges in this section are usually intended for high-temperature and general corrosive operations.

With our cutting edge technology and equipment our pipes and fittings offer an excellent price /quality ratio.

All our pipes and fittings are manufactured, heat treated, inspected, tested, and marked according to the requirements of the respective specifications. Thereafter a Manufacturer Test Report is issued for each batch.

The DB Piping group pipes and fittings are made from base materials ASTM A-240-304L & 316L; other alloys are available upon request.

This section includes:

- ASTM A 312 and ASME SA-312 welded pipes.
[Note (1 and 2)]
- ASTM A 403 and ASME SA-403 fittings
Grade WP, Class-S, W, WX and WU.
(See Table 1 for a brief description of the class)
- ASTM A 182 and ASME SA-182 stainless steel flanges.
- ASTM A 105 and ASME SA-105 carbon steel galvanized lap-joint flanges.

NPS [Nominal Pipe Size] diameter and thickness [Note (4)] of pipes and fittings are governed by ASME B36.19.

The maximum allowable operating pressure for pipe shall be calculated according to the pipe equation with or without longitudinal weld (as applicable) of the latest version of the applicable ASME code.

The dimensions of the fittings are governed by ASME B16.9.

The fittings are supplied with bevelled ends.

The maximum allowable working pressure for fittings (WP) is equivalent to the one for pipes of the same category (e.g.: Type of construction, diameter, thickness, chemical and mechanical requirements).

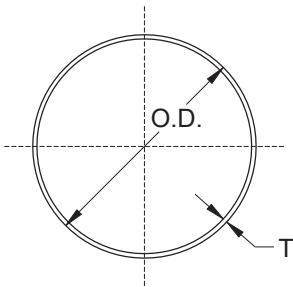

Dimensions and maximum allowable working pressure for flanges can be found inside ASME B16.5

Notes:

1. ASTM A312 and ASME SA-312 seamless pipes can be provided upon request.
2. ASTM A 269 and ASTM A 409 pipes can be supplied upon request.
3. Non-destructive examination is not performed on class "W" fittings when the welding process is done without filler addition.
4. In accordance with specifications ASTM A 312 / ASME SA-312 and ASTM A 403 / ASME SA-403 allowable tolerance will never be less than 87.5% of the nominal thickness at any measured point.

Grade	Class	Construction	Nondestructive Examination
WP	S	Seamless	None
WP	W	Welded	Radiography or Ultrasonic ⁽³⁾
WP	WX	Welded	Radiography
WP	WU	Welded	Ultrasonic

General Notes:

- a. Nominal diameter and thickness: According to ASME B36.19.
- b. Thickness Tolerance: According to A / SA-312 will never be less than 87.5% of the nominal thickness.
- c. Material: Stainless Steel TP-304L and TP-316L. Other alloys are available upon request.
- d. Maximum operating pressure: Must be calculated using the latest version of the applicable ASME code.

General Notes:

- a. Material: Stainless Steel 304L, 316L. Other alloys available on request.
- b. Grade WP - Class W, WX, WU, (Class S on request).
- c. Diameter and thickness: ASME B36.19.
- d. Dimensions: ASME B16.9.
- e. Thickness Tolerance: According to A / SA-403 will never be less than 87.5% of the nominal thickness.
- f. Dimensional Tolerance: ASME B16.9, Table 13.
- g. Bevel: ASME B16.9, Table 12.
- h. Allowable Pressure Rating: Must be calculated using the latest version of the applicable ASME code.

General Notes:

- a. Material: Stainless Steel 304L, 316L. Other alloys available on request.
- b. Grade WP - Class W, WX, WU, (Class S on request).
- c. Diameter and thickness: ASME B36.19.
- d. Dimensions: ASME B16.9.
- e. Thickness Tolerance: According to A/ SA-403 will never be less than 87.5% of the nominal thickness.
- f. Dimensional Tolerance: ASME B16.9, Table 13.
- g. Bevel: ASME B16.9, Table 12.
- h. Allowable Pressure Rating: Must be calculated using the latest version of the applicable ASME code.

Stub-end illustrated with Galvanized Lap-joint Flange
 (See P 4-12 & 4-13 for Lap-joint detail)

General Notes:

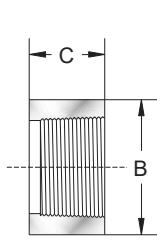

- a. Material: Stainless Steel 304L, 316L. Other alloys available on request.
- b. Grade WP - Class W, WX, WU, (Class S on request).
- c. Diameter and thickness: ASME B36.19.
- d. Dimensions: ASME B16.9. ([Short Pattern](#))
- e. Thickness Tolerance: According to A / SA-403 will never be less than 87.5% of the nominal thickness.
- f. Dimensional Tolerance: ASME B16.9, Table 13.
- g. Bevel: ASME B16.9, Table 12.
- h. Allowable Pressure Rating: Must be calculated using the latest version of the applicable ASME code.

General Notes:

- a. Material: Forged Carbon Steel, ASTM A105 and ASME SA-105.
- b. Finish: Galvanized to ASTM A 123.
- c. Dimension: ASME B16.5 Class 300.
- d. Maximum Allowable Working Pressure:
See ASME B16.5 material group, Table F2-1.1 material group 1.1 , or contact our technical representatives.
- e. Other classes available on request.

General Notes:

- a. Material: Stainless Steel F304L & F316L. Other grades available on request.
- b. Dimension: ASME B16.5 Class 300. Others Class available on request.
- c. Maximum Allowable Working Pressure: See ASME B16.5 Table F2-2.3 material group 2.3, or contact our technical representatives.

Slip-On Flanges

The slip-on flange has a low hub because the pipe slips into the flange prior to welding. It is welded both inside and out to provide sufficient strength and prevent leakage. Slip-on flanges are all bored slightly larger than the O.D. of the matching pipe. They are preferred over welding neck flanges by many users due to their lower initial cost, but final installation cost is probably not much less than that of the welding neck flange because of the additional welding involved.

Lap-Joint Flanges

The lap joint flange is practically identical to a slip-on flange except it has a radius at the intersection of the bore and flange face. This radius is necessary to have the flange accommodate a lap joint stub end. Normally, a lap joint flange and stub end are mated together in an assembly system.

Welding Neck Flanges

The welding neck flange is normally referred to as the "high hub" flange. It is designed to transfer stresses to the pipe, thereby reducing high stress concentration at the base of the flange. The welding neck flange is the best designed butt-welding flange of those currently available because of the design.

Socket Welding Flanges

The socket welding flange is similar to a slip-on flange except it has a bore and a counter bore dimension. The counter bore is slightly larger than the O.D. of the matching pipe, allowing the pipe to be inserted into the flange similar to a slip-on flange. The diameter of the smaller bore is the same as the I.D. of the matching pipe. A restriction is built into the bottom of the bore which sets as a shoulder for the pipe to rest on. This eliminates any restriction in flow when using a socket welding flange.

Threaded (Screwed) Flanges

The threaded flange is similar to the slip-on flange, but the bore is threaded. Its chief merit is that it can be assembled without welding, explaining its use in low pressure services at ordinary atmospheric temperatures, and in highly explosive areas where welding creates a hazard.

Blind Flanges

The blind flange is a flange without a bore. It is used to close off the ends of a piping system and / or a pressure vessel opening. It also permits easy access to the interior of line or vessel once it has been sealed and must be reopened.

Summary of specification

Our O.D. (Outside Diameter) pipes and fittings in austenitic stainless steel are manufactured as per specification ASTM A 778 for pipe and ASTM A 774 for fittings.

With our high-tech equipment, pipe and fittings offer an excellent price/quality ratio. Pipe and fittings in inventory of this class are manufactured from ASTM A 240-304L & 316L base material. Other alloys are available upon request.

Pipes and fittings manufactured as per ASTM A 778 & ASTM A 774 specifications are commonly used in pulp and paper mills, water treatment plants and other industries where corrosion resistance is not essential [See Note (1)].

Longitudinal seams are welded as per our qualified welding procedures using automatic or semi-automatic state of the art plasma welding torches in a single or double set-up. This welding procedure reduces greatly the effects of carbides precipitation in the heated affected zone.

Pipe and fittings can be supplied in a wide range of diameters and wall thicknesses.

For each lot of pipe, a tension, reverse, forward bend tests is performed.

Welded elbows can be supplied as smooth flow or mitred construction, reducers are supplied as conical, tees, crosses and laterals are supplied as nozzle-welded.

Dimensions and tolerances of fabricated fittings are in the technical section, see Page 7-6. Special fittings can be supplied to customer design and size when required.

Only visual examination is performed on fitting.

Pipe and fittings are also pickled and passivated as per ASTM A-380 to maintain corrosion resistance and to prevent surface discoloration from free iron oxidation.

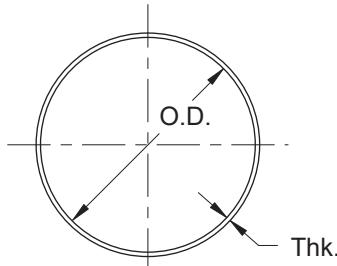

Base metal analysis is traceable to the original mill certificates.

As per ASTM A-778 & A-774, tolerance of nominal thickness permissible shall be $\pm 12.5\%$

Pipe and fittings are normally furnished in square cut ends but can also be provided with beveled ends.

Note

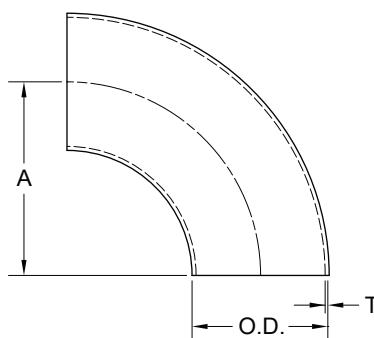

1. For heat treated pipe and fittings, please refer to section 4.0 of NPS ASTM A-312 and ASTM A-403.

90° Mitred Elbow
Long Radius

90° Mitred Elbow
Short Radius

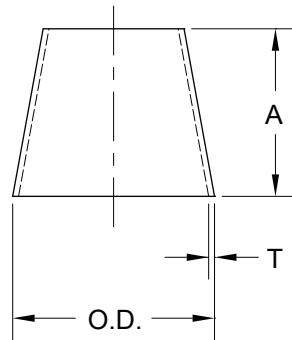

45° Mitred Elbow

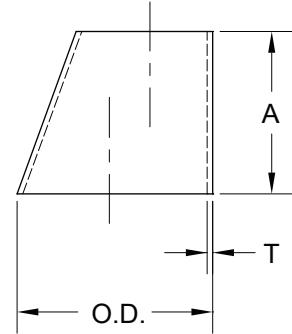

General Notes:

- a. Material: Stainless Steel 304L, 316L, 317L, Other alloys available upon request.
- b. Suggested Maximum Working Pressure : See technical section.
- c. Fabrication Tolerance: See technical section.
- d. Other diameter and thickness available upon request.

Butt Weld Angle Collars
For using with Backing Flanges
See P. 2-14

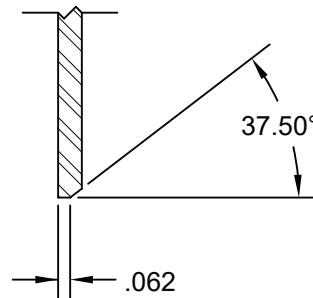

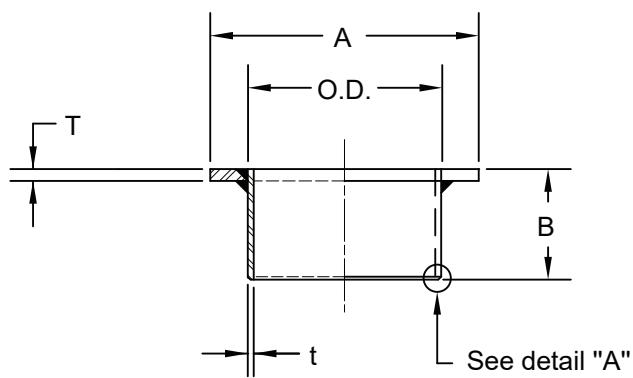

Slip-on Angle Collars
For using with Slip-on Backing Flange
See P. 2-15

General Notes:

- a. Material: Stainless Steel 304L, 316L, 317L, Other alloys available upon request.
- b. Suggested Maximum Working Pressure : See technical section.
- c. Fabrication Tolerance: See technical section.
- d. Other diameter and thickness available upon request.

Detail "A" [Note 1]

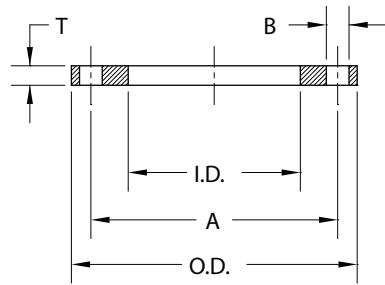

General Notes:

- a. Material: Stainless Steel 304L, 316L, 317L, Other alloys available upon request.
- b. [T] not less than [t].
- c. The two faces are machined, the contact face is machined between 125 and 250 microinches (AARH)
- d. Solution Annealing on request.
- e. Other diameter, thicknesses and sizes available upon request.

Note:

- 1. Bevel for thickness (t) > 1/8" (3mm)

General Notes:

- a. Material: Carbon Steel with chemical composition and mechanical strength equivalent to ASTM A 105 and 316L Stainless Steel liner.
- b. Finish: Galvanized to ASTM A 123
- c. Drilling: 1 1/2" to 24" ASME B16.5 Class150, 30" to 48" ASME B16.47 Class150 serie "A"
- d. Suggested Maximum Working Pressure : See technical section.
- e. Other diameter and thickness available upon request.

Open position dished manway

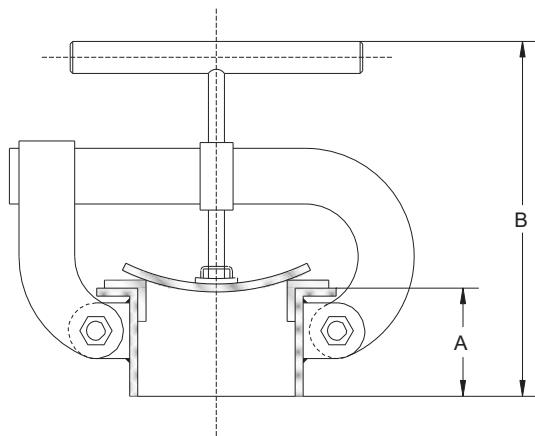

Closed position dished manway

General Notes:

- Design can be different from illustration. Contact DBI representative for actual design.
- Material : Stainless Steel 304L, 316L. Other alloys available upon request.
- Dim "A" available from 24" up to 48". Dim "B" from 20" up to 42".

Quick Opening Clean-Out

16	406	0.188	4.8	8.000	203	19.250	489	80.0	36.3

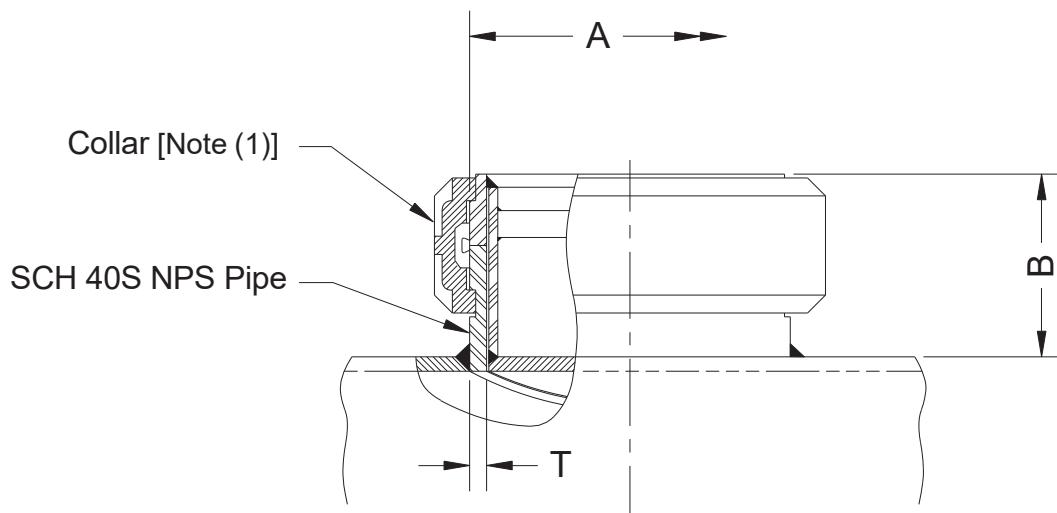

Fabricated for an easy installation at the end of pipe or on elbows.
 It offers a quick and easy access to the interior of pipe for inspection and cleaning.

General Note:

- a. Material : Stainless Steel 304L.

Nominal Diameter		T		A		B	
inches	mm	in	mm	in	mm	in	mm
3	76	0.216	5.5	3.500	89	2.750	70
4	102	0.237	6.0	4.500	114	2.750	70
6	152	0.280	7.1	6.625	168	2.750	70

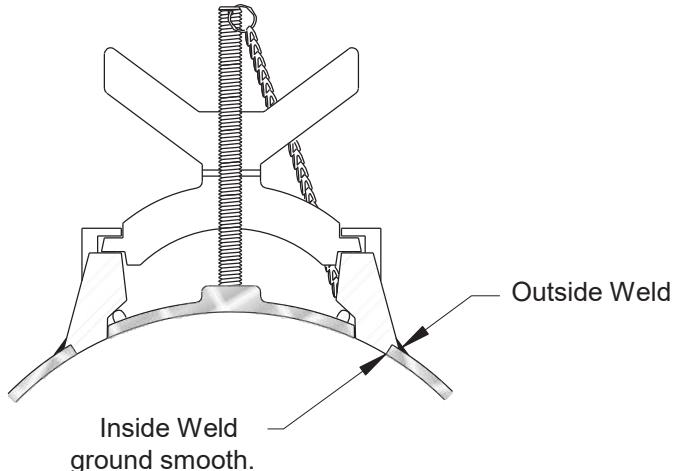

The cover of this type of clean-out is provided with a snugly fitting plug, which provides a smooth bore on the interior of the pipe, thus eliminating stock hang-up.

General Notes:

- a. Material: Stainless Steel 316L .
- b. Available upon request in larger size.

Note:

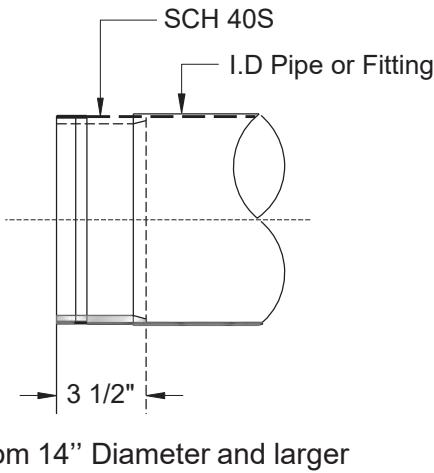

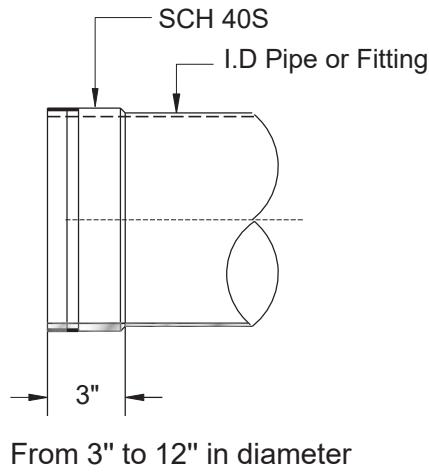

- 1. Usually provided with a Victaulic® collar Style 78 Snap-Joint.

# 12	12 to 18	12 to 18	24 & larger	24 & larger
	300 to 450	300 to 450	610 & larger	610 & larger

General Notes:

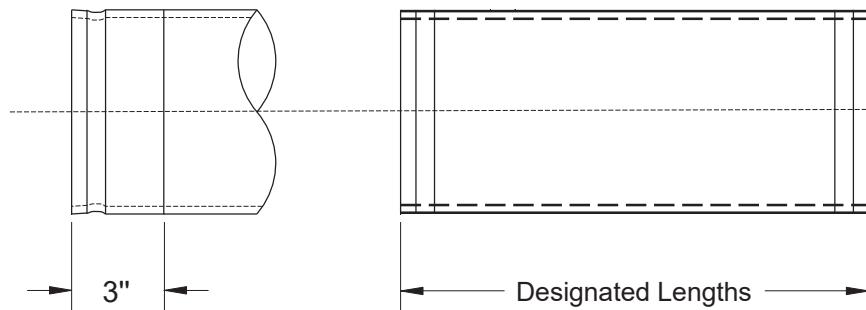

- a. Constructed of all 316L Stainless Steel parts, including the wing nut.
- b. High sealing strengths (the higher the pressure the tighter cover seals).
- c. Permit quick flushing when installed on both sides of pumps and valves without removing bolted connections.
- d. Quick and easy visual access into piping systems, tanks and vessels.
- e. No tools required to open.

Cut Groove for use with I.D. Pipes and Fittings

Cut Groove for use with NPS Pipes and Fittings Sch 5S, 10S and 40S

Rolled Groove and AGS⁽¹⁾ for use with I.D. and NPS Pipes and Fittings

General Notes:

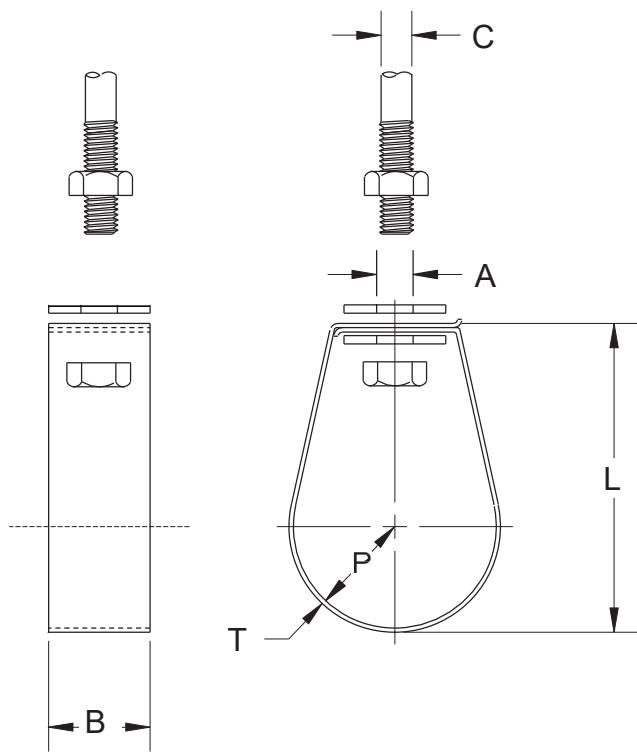

- a. Material : Stainless Steel 304L, 316L. Other alloys available upon request.
- b. Available from stock in sizes 3" to 12" with standard groove.
- c. Larger sizes and other adaptor styles available upon request for both I.D. & NPS pipe.

Note:

1. For use with Victaulic®flexible and rigid collar AGS (Advance Groove System) for NPS 14" to 24", Sch 10S.

General Notes:

- These Line Blanks are designed to be used with flanges having the dimension to ASME B16.5 Class 150.
- Material : Stainless Steel 304L, 316L. Other alloys available upon request.
- Thickness: See "Thk". Other thicknesses and designs available upon request.
- Maximum Allowable Working Pressure must be calculated with the ASME B31 code applicable.
- Tolerances: $\pm 1/16"$.

**Suggested Maximum Working Pressure .
I.D. Pipe and Fittings ASTM A 778 / A 774.
For Maximum Working Temperature of 200°F (93°C).**

General Notes:

- a. Pressure ratings are limited to non-toxic, non-lethal, non-flammable liquids in non-cyclic, vibration-free service, and/or where ASME B-31 Codes are not applicable.
- b. Thickness tolerance to ASTM A 778 & A 774.

Note:

- 1. Pressure ratings of tees & laterals can be increased by the use of reinforcing pads. Please contact our technical services.

Suggested Maximum Working Pressure .
 NPS Pipe and Fittings ASTM A 778 / A 774.
 For Maximum Working Temperature of 200°F (93°C).

General Notes:

- a. Pressure ratings are limited to non-toxic, non-lethal, non-flammable liquids in non-cyclic, vibration-free service, and/or where ASME B-31 Codes are not applicable.
- b. Thickness tolerance to ASTMA 778 & A 774.

Note:

- 1. Pressure ratings of tees & laterals can be increased by the use of reinforcing pads. Please contact our technical services.

Suggested Maximum Working Pressure.
ASTM A774 Collars and Carbon Steel Backing Flanges.
For Maximum Working Temperature of 200°F (93°C).

48	1219	n/a	n/a	125	862	60	414	90	621

Notes:

- Pressure ratings are limited to non-toxic, non-lethal, non-flammable liquids in non-cyclic, vibration-free service, and/or where ASME B-31 Codes are not applicable.
- Thickness tolerance to ASTM A778 & A774.
- The leak test over 150 psig is not suggested with the use of smooth face collars.
- Use 0.250" for 125 psig and 0.375" for 150 psig.
- The suggested maximum working pressures are based on the thickness (see pages 2-15 to 2-17 and 3-14 to 3-16) with gasket, bolts and torque as recommended by our technical department.
- The hydrostatic test pressure should not exceed 1.3 x Maximum Working Pressure indicated in table.

Pipe straightness = 0.025 in per foot / 2mm per meter

1. Scope

1.1 This standard covers general pipe shop fabricating tolerances for prefabricated piping assemblies.

2. Linear tolerances

- 2.1 The tolerances on linear dimensions (intermediate or overall) apply to the face to face, face to end, and end to end measurements of fabricated straight pipe and headers; center to end or center to face of bends; as illustrated on fig.1. These tolerances are not cumulative.
- 2.2 Linear tolerance on "A" are $\pm 1/8"$ (3.0 mm) for size 10" and under, $\pm 3/16"$ (5 mm) for size 12" through 24" and $\pm 1/4"$ (6 mm) for size over 24" through 36".
- 2.3 Linear tolerances on "A" for size over 36" are subject to tolerance of $\pm 1/4"$ (6 mm), increasing by $\pm 1/16"$ (2 mm) for each 12" in diameter over 36".
- 2.4 Due to the cumulative effects of tolerances on fitting or flanges, when joined without intervening pipe segments, deviations in excess of those specified in paragraphs 2.2 and 2.3 may occur.

3. Angularity and rotation tolerances.

3.1 Angularity tolerance across the face of flanges, weld end preparation and on rotation of flanges are as stated on Fig 1.

4. Closer tolerances

- 4.1 When closer tolerances than those given in paragraphs 2.2, 2.3 and 2.4 , they shall be subject to agreement between the Purchaser and Fabricator.

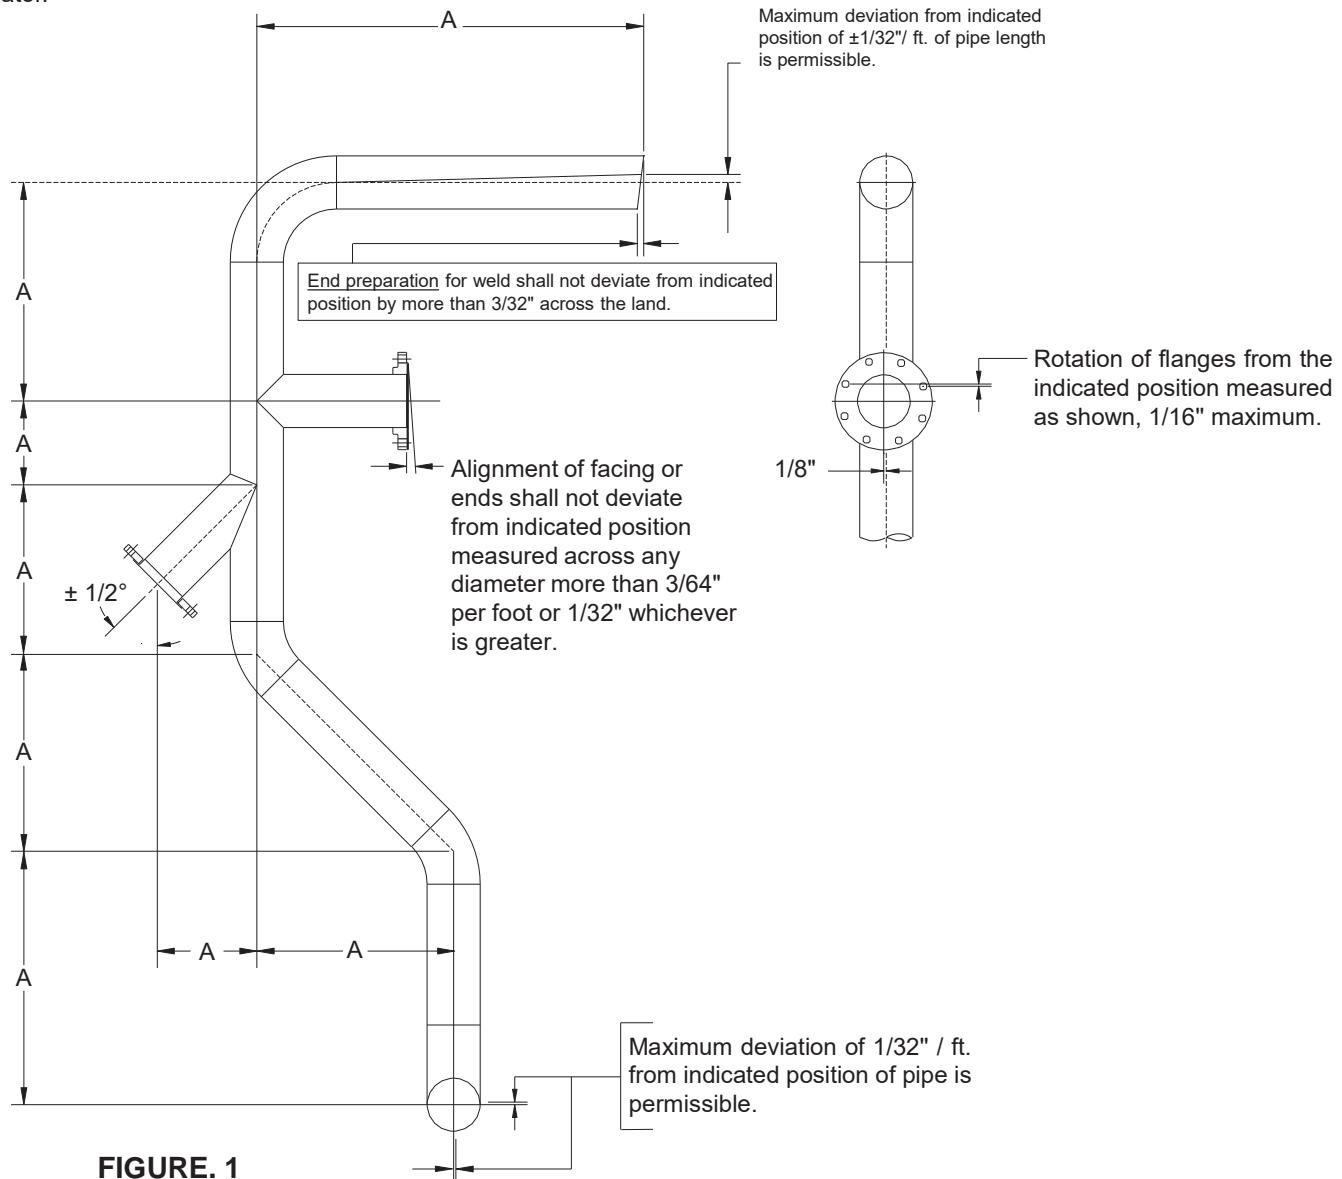

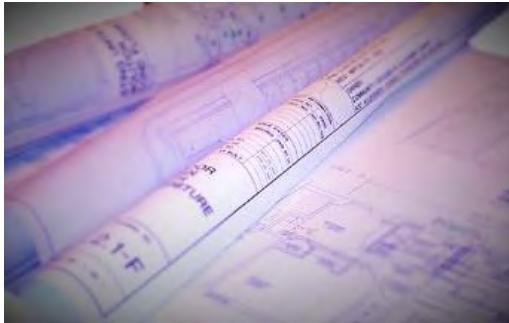

FIGURE. 1

With roots starting in 1875, Douglas Barwick focuses on piping projects for multiple industries as well as offering loose pipe, fittings and flanges for specific projects. With locations in Ontario and Quebec and over 100,000 square feet of shop space and an experienced work force, they are able to manage both small and large scale contracts, allowing their customers to focus on planning to manage their project on time and on budget.

ABE joined the group in 2013. They are a highly efficient, lean manufacturer that focuses on selling loose pipe and fittings to distribution and manufacturers. Founded in 1973, ABE has been focused on producing ANSI, ID and OD Pipe sizes in light to heavy wall, with a wide range of alloys and specifications. With robotic manufacturing and a global supply chain they can provide customers with a complete package that ensures they will be competitive.

Douglas Brothers provides engineered fabrication for multiple products. Incorporated in 1972, their highly experienced team of estimators, assemblers and welders can focus on specific engineered needs from tanks to aerators to piping segments to specialized designs. Located in Portland, Maine they can manage jobs from local to international; from big to small. When customers choose Douglas Brothers for their industrial stainless steel fabrication, they can expect stringent attention to detail, steadfast dependability and timely delivery.

Your specialized needs need a specialist. They need Formweld.

Formweld is truly built to serve you, our customer. From equipment that is easily changed over and suited to small batches, to employees well trained and very adapted. Formweld is great at handling with excellence that which others can rarely do at all.
